

Learning rate cheat sheet (placeholder)

Replace this file with the real cheat sheet referenced in "Gradient descent, one step at a time".

$\eta = 0.02$ too small: 40 steps do not reach the minimum

$\eta = 0.10$ good: converges cleanly

$\eta = 0.23$ zig-zag: overshoots the steep direction

$\eta = 0.26$ diverges: past the $2 / \text{curvature}$ stability limit
